**DETAILED ACTION**

***Claims 1-8 and 22-25 have been withdrawn from further consideration as not reading on the elected invention. Applicant's arguments have been considered, however it is deemed that the use of high pressure and temperatures in making polymeric foams in the extrusion molding art is well known in the art and it would appear that applicant's position is speculative especially in view of the patent cited herein.***

***Double Patenting***

**1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).**

**A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).**

**Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).**

**2. Claims 9-21 are rejected under the judicially created doctrine of double patenting over claims 7-15 of U. S. Patent No. 6,232,354 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.**

**The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: the instant claims are broad enough to read on the microcellular cell size of the claims of the patent since the instant claims have not specified what size cell size range is intended by use of the term "mesoporous" since the prior art have different interpretations of what the ranges of microcellular and mesoporous are. Furthermore the pressure used in the instant claims reads on the specific range of pressure called for in the instant case.**

**Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which**
